

BAYA BAMBOO

Black

- **Handy:** thanks to its double articulated swivel arm, this lamp is equipped with compensating springs facilitating its orientation in all directions.
- **Eco designed product:** the use of a bamboo (grass) part, high-quality steel for the base and recyclable aluminum for the arm thus contributes to the preservation of natural resources and to reducing our environmental impact.
- **Neo retro design:** this lamp with a timeless design evoking vintage objects has been revamped to be trendy and modern thanks to the alliance of materials both natural (bamboo) and industrial (metal).
- **Protect your eyes:** this LED desk lamp provides quality and comfortable lighting because it is flicker-free. It is pleasant for the eyes and thus reduces the effects of fatigue.
- **Stability:** its weighted base ensures perfect stability of the lamp on your desk.
- **Versatile:** it is sold on a base and with clamp (maximum spacing 5 cm) and adapts to all uses.

- 2 years warranty
- Maximum height: 55 cm / minimum height: 15 cm
- Materials: pedestal, arm and head in epoxy painted steel and recyclable aluminum

Replaceable (LED only) light source by an end-user

UNILUX'S ADVICES

1- Why using a desk lamp ?

We spend about 8 hours a day at our place of work. Occupational medicine **recommends lighting of at least 450 lux**. The European standard NF EN 12464-1 * **goes up to 500 lux** for screen work or reading. You should know that an office equipped with fluorescent ceiling lights usually receives **200 and 300 Lux** for those in LED!

The consequences of constant and insufficient artificial interior lighting:

- **Decreased visual comfort**
- **Headache**
- **Badly lapping the general concentration**
- **Decrease in productivity**
- **Disturbances of the circadian cycle**
- **Sleep and mood disorders**

* Standard NF EN 12 464-1 (European standard): Requirement for lighting indoor workplaces

2- Some figures

300 Lux

Only on the desk fitted with ceiling lights

34% of offices

Reach the level of 500 Lux prescribed by Occupational Medicine

29 % of employees

Report suffering from eyestrain *

3- The LED's Benefits

High quality and efficient lighting

Longer life

Energy saving

Eco-responsible purchase

Safe for the health

4- Somes definitions

Illuminance (Lux)

corresponds to a quantity of light received by a surface. So:

- Φ : Luminous flux in lumen
- S: surface per m²

$$E = \frac{\Phi}{S}$$

Recommended lighting according to DIN EN 12464-1 * for the office

- 300 Lux : deposit, copy, traffic areas
- 500 Lux : writing, reading, data processing
- 500 Lux : at the reception and at the counter
- 750 Lux : technical drawing

* DIN EN 12464-1 (DIN 5035-1): European standard that determines the lighting requirements of workstations in enclosed areas, which meet the requirements of comfort and visual performance. DIN EN 12464-1 has replaced DIN 5035-1

Luminous flux (lm)

is defined by the sum of all the radiations emitted by the lamp. It is measured in Lumen, "lm" for short. It is defined from the energy flux (expressed in watts) more often termed radiated power.

The latter is a flow of radiated energy:

$$\Phi = \frac{Q}{t}$$

where Q is the radiated energy, expressed in joules (J) and t in seconds (s)

Luminous efficiency (lm/W)

corresponds to the luminous efficiency of the lamp. This value is established by the ratio between the luminous flux and the power consumed. It is measured in "lm / W". The higher the luminous efficiency, the higher the amount of light relative to the power consumed. This data is fundamental for the preservation of the environment since it allows us to reduce energy consumption for the same amount of light emitted.

Color temperature (Kelvin)

is defined by the color emitted by the light source. Variation in color temperature is an essential function of the desk lamp in addition to the variation of the intensity, as it allows to customize the lighting and to adapt the appropriate color temperature to the different activities (computer work, concentration, reading, relaxation, rest, ...). This variation in color temperature is measured in "Kelvin", "K" for short.
